GLORIOUS GREENS
GREEN VEGETABLES ARE THE FOODS MOST COMMONLY MISSING IN MODERN DIETS.

Learning to incorporate dark, leafy greens into your diet is essential to establishing a healthy body and immune system. When you nourish yourself with greens, you may naturally crowd out the foods that make you sick. Greens help build your internal rainforest and strengthen the blood and respiratory system. Leafy green vegetables are also high-alkaline foods that may be beneficial to people exposed to higher amounts of pollution in urban areas.

The alkaline minerals in our bodies are used to neutralize acidic conditions caused by the environment. Green vegetables will help to replenish our alkaline mineral stores and continue to filter out pollutants.¹

Green is associated with spring – the time of renewal, refreshment, and vital energy. In Traditional Chinese Medicine, green is related to the liver, emotional stability, and creativity.
Nutritionally, greens are very high in calcium, magnesium, iron, potassium, phosphorous, zinc, and vitamins A, C, E, and K. They are loaded with fiber, folic acid, chlorophyll, and many other micronutrients and phytochemicals. Although choosing organic is recommended, eating non-organic greens is still preferable to not eating any greens at all!

Some of the proven and possible benefits of consuming dark leafy greens are:

- Blood purification
- Cancer prevention
- Improved circulation
- Strengthened immune system
- Promotion of healthy intestinal flora
- Promotion of subtle, light, and flexible energy
- Improved liver, gall bladder, and kidney function
- Cleared congestion, especially in lungs by reducing mucus
There are a wide variety of greens to choose from, so try to find options that you will enjoy and eat often.

If you get bored with your favorites, be adventurous and explore new greens that you’ve never tried before.

Dark leafy greens

Broccoli is one option that is very popular among adults and children. Also try to include bok choy, napa cabbage, kale, collards, watercress, mustard greens, broccoli rabe, dandelion, and other dark, leafy greens.

Wild greens

Green cabbage is great cooked or raw, or in the form of sauerkraut. Arugula, endive, chicory, lettuce, mesclun, and wild greens are generally eaten raw, but can be consumed in any creative way you enjoy.

Eat in moderation

Spinach, Swiss chard, and beet greens are best eaten in moderation because they are high in oxalic acid, which inhibits the absorption of the calcium these foods contain. However, rotating between a variety of green vegetables shouldn’t cause any nutritional consequences in regards to calcium.
COOKING GREENS

Try a variety of methods like steaming, boiling, sautéing in oil, water sautéing, waterless cooking, or lightly pickling (as in a pressed salad). Boiling helps greens plump and relax.

You can also drink the cooking water as a health-giving broth or tea if you’re using organic greens. Steaming makes greens more fibrous and tight, which helps you feel fuller, longer. This is a great method to help curb your appetite for those trying to lose weight. Raw salad is also a wonderful preparation for greens. It’s refreshing, cooling, and supplies live enzymes.
